I have over two years of experience developing RESTful APIs with Go, along with foundational skills in architecture design and solutions. I enjoy writing documentation on workflows and architecture to foster collaboration and mutual understanding.

WORK EXPERIENCE

Backend Developer

May 2022 - Current

Nexter Digital & Solution Co., Ltd.

- Developed RESTful APIs using Go language with a microservices architecture, enabling scalability and maintainability while facilitating efficient inter-service communication via gRPC.
- Implemented an automated payout system integrating with KGP, which reduced payout time from 3 days to 1 day.
- Developed a payment system integrating with 2C2P, including functionality for processing payments, voiding transactions, managing refunds, and updating payment status in real time using the Firebase Realtime Database.
- Implemented a Customer Service Sentiment Solution to Reduce Time-to-Critical-Call
 - Developed a distributed rate limiter to efficiently manage third-party rate limits, preventing service interruptions.
 - Built services for fetching, downloading, and analyzing customer service calls, enabling timely critical call detection.
 - Tuned prompts to improve call analysis accuracy, reducing false positives and increasing detection reliability.
 - Implemented CI/CD pipelines with GitHub Actions for automated deployment, environment changes, release notes, and Discord notifications.
 - Created a report generator to automate critical call reporting for company admins and supervisors.
- Developed a media processing service to convert image files to WebP format. Utilized a message queue (Pub/Sub) and gRPC to support both synchronous and asynchronous requests, prioritizing scalability and optimizing web loading speed.
- Improved query performance by optimizing indexes and query statements.
- Maintained and enhanced a shared library for Go microservices, focusing on reusable functions.

- Implemented an API Gateway using KrakenD
 - Created a flexible configuration for easier maintenance across multiple projects and enabling the reuse of configurations for various endpoints.
 - Consolidated maintenance to a single subdomain with a unified endpoint, optimizing the microservices architecture.
 - Supported the transformation of API responses for multiple platforms, enhancing support for the Backend for Frontend (BFF) pattern.
- Good knowledge on push notifications using Firebase Cloud Messaging in mobile applications.
- Developed solutions for complex problems with clear diagrams to visualize workflows and interactions, enhancing understanding and collaboration among stakeholders.
- Designed system architecture and database structures, providing documentation for service protocols and data flow to ensure clarity for development and maintenance teams.
- Skilled in monitoring logs and investigating incidents for quick issue resolution and system integrity maintenance.
- Prepared API documentation using Stoplight, supporting versioning and changelogs to enhance cross-team communication.

EDUCATION

Silpakorn University

2019 - 2023

Bachelor of Science, Computer Science (GPA 3.79)

SKILL

Language: Experiences in Go, JavaScript, TypeScript

Frontend: ReactJS, NextJS, VueJS, SvelteJS

Backend: Echo (Go), Node.js, NestJS

Database: PostgreSQL, MySQL, MongoDB, Redis

DevOps: Docker, Basic of Kubernetes, GitHub Actions, Circle CI, Argo CD

Other: Firebase, Google Cloud, gRPC, Web Socket
